Algebras for a Functor

Gašper Golob in Nejc Zajc

Project presentation, 26.5.2022

Motivation

Modelling inductive types.

F-Algebras

category C, endofunctor $F: C \rightarrow C$

F-Algebras

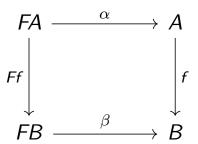

category C, endofunctor $F: C \rightarrow C$

$$FA \xrightarrow{\alpha} A$$

F-Algebras

category C, endofunctor $F: C \rightarrow C$

Initial Objects

Such an object I, that for every object X, there exist a **unique** morphism $I \rightarrow X$.

Lambek Lemma

Lemma (Lambek)

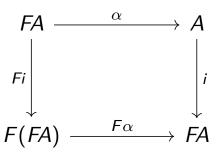

If $I = (A, \alpha)$ is an initial algebra, then A is isomorphic to FA via α .

Lambek Lemma

Lemma (Lambek)

If $I = (A, \alpha)$ is an initial algebra, then A is isomorphic to FA via α .

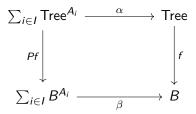

Polynomial Functor

- project only defines them on **Sets**
- $PX = \sum_{i \in I} X^{A_i}$, for $A : I \to \mathbf{Set}$
- natural numbers from PX = 1 + X

Initial algebra for polynomial functors

- Tree has a constructor Node $\sum_{i \in I} \text{Tree}^{A_i}$
- initial object is the F-algebra of the Tree

Future work

- implement presentation of natural numbers with F-algebras
- implement presentation of lists with F-algebras
- generalize polynomial functors
- generalize existance of initial algebras

Problems in Implementation

Problems in Implementation

```
; _o_ = λ f g → record {
f = F-Algebra-Morphism.f f ∘ F-Algebra-Morphism.f g ;
commutes = glue {! 0!} (F-Algebra-Morphism.commutes f)
(F-Algebra-Morphism.commutes g)}
```

Problems in Implementation

```
; _o_ = λ f g → record {
 f = F-Algebra-Morphism.f f ∘ F-Algebra-Morphism.f g ;
 commutes = glue {! 0!} (F-Algebra-Morphism.commutes f)
 (F-Algebra-Morphism.commutes g)}
```

```
\mathsf{Initial}\ I \ \Rightarrow \mathsf{record}\ \{\ \bot\ ,\ \bot\mathsf{-is\text{-}initial}\ \} \ \Rightarrow \mathsf{record}\ \{\ A\ ,\ \alpha\ \}\ .
```
